Experiment 12: Creating Reports and Dashboards for Data Visualization in Zoho Creator

Aim

To create reports and a dashboard in Zoho Creator that present leave data visually.

Objective

- Create list and summary reports from form data.
- Apply filters and sorting.
- Create charts using the Leave Request data.
- Combine the charts on a dashboard page.

Types of Reports Used

Report Type	Use
List report	Shows records in rows and columns
Summary report	Groups data and shows totals (e.g., leaves by type)
Chart (Pie / Bar / Line)	Shows data graphically
Pivot / KPI	Cross-tab or a single key number

Procedure

A. Prepare data

Make sure the Leave Request form has at least 10 sample records with different leave types, departments and statuses.

B. List report with a filter

1. Click **+ Report** and select the Leave Request form.
2. Name it **Pending Leaves** and choose the columns to show.
3. Add a filter: *Status is Pending* and sort by From Date.
4. Save and open the report to verify.

C. Charts

1. Create a report of type **Chart**: Pie chart, Category = Leave Type, Value = count of records. Name it *Leaves by Type*.
2. Create a Bar chart: X-axis = Department, Y-axis = count. Name it *Leaves by Department*.
3. Create a KPI / number report showing total pending requests.

D. Dashboard

1. Click **+ Page** and name it **Leave Dashboard**.
2. Drag the KPI, the pie chart, the bar chart and the Pending Leaves report onto the page and resize them.
3. Add a title text and save; add the dashboard to the Manager Panel menu.
4. Open the dashboard and use the filters to confirm the charts update.

Attach screenshot here - charts created

Attach screenshot here - final Leave Dashboard

Observations

- The pie chart shows which leave type is used most.
- The bar chart shows which department takes the most leave.
- The KPI shows the current pending workload for managers.

Results

Reports, charts and a combined Leave Dashboard were created, giving managers a quick visual summary of leave data.

Conclusion

Reports and dashboards turn stored records into useful information. Zoho Creator provides ready chart types, so visual analysis needs no extra tools or coding.
